

USER STORY 18 - CREATE USER AND ASSIGN ROLE

Section	Content
Card	As an Admin I want to create a new user account and assign a role So that I can grant system access with correct permission
Summary	Create User And Assign Role
In-scope	Open create user modal Input user information Input full name Input email Input password Select user role Save new user Assign permission based on selected role
Out of scope	Bulk import users Create multiple users at once Reset user password Send invitation email
Trigger	Admin clicks Add User
Pre-condition	Admin role Admin is logged in Admin has permission to manage users
Business rule and error message	Only Admin can create a new user account Unauthorized user → show “Access denied” Required user information must be provided before saving Missing required information → show “Please fill in all required fields”

Section	Content
	Email must be in valid format Invalid email → show “Invalid email format” Email must be unique in the system Duplicate email → show “Email already exists” Selected role must be valid and belong to system role list Invalid role → show “Invalid role selected” New user account is active by default after creation Create successfully → show “User created successfully” If system cannot create user Create failed → show “Failed to create user. Please try again”
Screen design	
Acceptance Criteria	AC1: Given Admin opens Create User Modal, when the modal is displayed, then system shows fields for full name, email, password and role AC2: Given Admin enters valid user information, when Admin clicks Save, then system creates user successfully AC3: Given Admin selects a role, when user is created, then system assigns the selected role to that user AC4: Given required fields are empty, when Admin clicks Save, then system shows validation error

Section	Content
	AC5: Given email already exists, when Admin clicks Save, then system shows duplicate email error AC6: Given non-admin user tries to create user, then system denies access

USER STORY 19- EDIT USER INFORMATION

Section	Content
Card	As an Admin I want to edit user account information So that I can keep user information and permission up to date
Summary	Edit User Information
In-scope	View user list Open edit user modal View current user information Edit full name Edit email if allowed Edit role Save updated user information
Out of scope	Delete user permanently Bulk update users Reset password View user activity history
Trigger	Admin clicks Edit on a user row
Pre-condition	Admin role Admin is logged in User account exists

Section	Content
Business rule and error message	Only Admin can edit user account information Unauthorized user → show “Access denied” Target user account must exist User not found → show “User not found” Required user information must not be empty when updating Missing required information → show “Please fill in all required fields” Email must be in valid format if it is updated Invalid email → show “Invalid email format” Updated email must not duplicate another user’s email Duplicate email → show “Email already exists” Selected role must be valid and belong to system role list Invalid role → show “Invalid role selected” Updated information must be saved successfully Update successfully → show “User updated successfully” If system cannot update user information Update failed → show “Failed to update user. Please try again”
Screen design	 The screenshot displays the 'Solashi Connect' user management interface. On the left is a sidebar with navigation links: Dashboard, Change Requests, and Permissions. The main area shows a list of users with columns for Name, Created Date, Status, and Actions. An 'Edit User' modal is open, showing fields for Last Name, First Name, Email, Phone, and Role. The user list table has columns for Created Date, Status, and Actions. The modal has 'Cancel' and 'Update' buttons.
Acceptance Criteria	AC1: Given Admin clicks Edit on a user, when user exists, then system opens Edit User Modal with current user information AC2: Given Admin updates valid information, when Admin clicks Save, then system updates user information successfully

Section	Content
	AC3: Given Admin changes user role, when update is saved, then system applies the new role permission to that user AC4: Given required fields are empty, when Admin clicks Save, then system shows validation error AC5: Given target user does not exist, then system shows error message AC6: Given non-admin user tries to edit user information, then system denies access

USER STORY 20 - DEACTIVATE ACTIVE USER ACCOUNT

Section	Content
Card	As an Admin I want to deactivate an active user account So that I can prevent that user from accessing the system
Summary	Deactivate User Account
In-scope	View user list Show user status Select active user Deactivate active user account Update user status to inactive Prevent inactive user from logging in
Out of scope	Delete user permanently Remove user data Reassign Change Requests Bulk deactivate users
Trigger	Admin clicks Deactivate on an active user account

Section	Content
Pre-condition	Admin role Admin is logged in User account exists User account is active
Business rule and error message	Only Admin can deactivate user account Unauthorized user → show “Access denied” Target user account must exist User not found → show “User not found” Only active account can be deactivated Already inactive account → show “User is already inactive” Deactivated account cannot log in or continue using protected system functions Inactive account access → show “Your account has been deactivated” User information must remain in the system after deactivation Deactivate successfully → show “User deactivated successfully” If system cannot deactivate user account Deactivate failed → show “Failed to deactivate user. Please try again”
Screen design	 The screenshot displays the 'Solashi Connect' user management interface. On the left is a sidebar with navigation links: Dashboard, Change Requests, and Permissions. The main area shows a table of users under the 'Accounts' tab. The table has columns for Name, Email, Role, Created Date, Status, and Actions. There are six users listed: two active customers, two active project managers, and two inactive administrators. A 'Deactivate' button is visible in the actions column for the first active user.
Acceptance Criteria	AC1: Given Admin views user list, when user account is active, then system shows status as Active AC2: Given Admin clicks Deactivate on an active user, when action is confirmed, then system updates user status to Inactive

Section	Content
	AC3: Given user account is inactive, when that user tries to login, then system prevents login AC4: Given user is deactivated successfully, then system still displays the user in user list AC5: Given Admin tries to deactivate an already inactive user, then system shows error message AC6: Given non-admin user tries to deactivate user account, then system denies access

USER STORY 21 - ACTIVATE INACTIVE USER ACCOUNT

Section	Content
Card	As an Admin I want to activate an inactive user account So that the user can access the system again
Summary	Activate User Account
In-scope	View user list Show user status Select inactive user Activate inactive user account Update user status to active Allow activated user to login again
Out of scope	Create new user Reset password Change user role Send activation email Bulk activate users
Trigger	Admin clicks Activate on an inactive user account

Section	Content																																										
Pre-condition	Admin role Admin is logged in User account exists User account is inactive																																										
Business rule and error message	Only Admin can activate user account Unauthorized user → show “Access denied” Target user account must exist User not found → show “User not found” Only inactive account can be activated Already active account → show “User is already active” Activated account can log in again with valid credentials Activate successfully → show “User activated successfully” User role and user information must remain unchanged after activation Unexpected update error → show “Failed to activate user. Please try again” If system cannot activate user account Activate failed → show “Failed to activate user. Please try again”
