

USER STORY 10 - CREATE CHANGE REQUEST

Section	Content
Card	As a Customer I want to create a Change Request So that I can record a requested change and prepare it before submitting it for review
Summary	The Customer enters required Change Request information such as title, description, space, priority, work type, sprint, and due date. The system validates the input, creates a unique CR key, stores the request, and automatically sets the initial status to DRAFT so the Customer can continue editing or attach supporting files before submission.
In-scope	- Create a new CR from the Change Request module - Validate required fields and field formats - Generate a unique CR key - Set new CR status to DRAFT by default - Save initial status history for the created CR - Allow Customer to upload attachments after the CR is created while it is still in DRAFT
Out of scope	- Creating CRs by Admin or PM - Submitting the CR automatically after creation - Creating a CR without an active space, priority, or work type - Uploading attachments directly inside the create request payload

Trigger	The process is initiated when the Customer opens the Change Request creation screen, fills in the CR form, and clicks the “Create” or “Save Draft” button.
Pre-condition	- Customer is logged in - Customer role is CUSTOMER - Active space exists in the system - Priority and work type master data exist
Business rule and error message	Rule: Only Customer can create a Change Request → Error: "Only customers can create a change request" Rule: Title must be provided and contain at least 3 characters → Error: "Title must be at least 3 characters long" Rule: Title must not exceed 255 characters → Error: "Title must not exceed 255 characters" Rule: Description must not exceed 5000 characters → Error: "Description must not exceed 5000 characters" Rule: Space, priority, and work type must be valid → Error: "Invalid change request information" Rule: Selected space must exist and be active → Error: "Selected space is not available" Rule: Selected priority must exist → Error: "Selected priority is not available" Rule: Selected work type must exist → Error: "Selected work type is not available" Rule: Selected sprint must belong to the selected space → Error: "Selected sprint is not available for this space" Rule: Due date must be in a valid date format → Error: "Invalid date format" Rule: New Change Request must be created in Draft status → Error: "Draft status is not available in the system"

Screen design

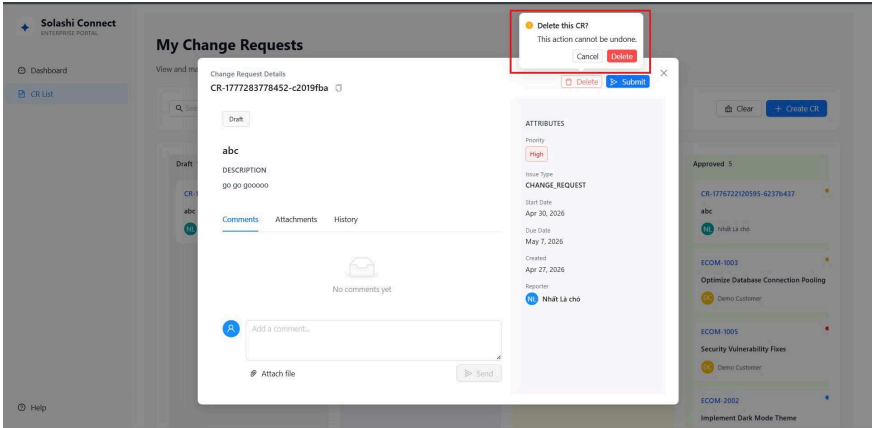

Acceptance Criteria	AC1: Given the logged-in user is a Customer When the Customer enters valid CR information and clicks Create Then the system creates the CR successfully and displays it with DRAFT status AC2: Given the Customer creates a CR successfully When the system saves the CR Then the system generates a unique CR key and records the initial status history as DRAFT AC3: Given the Customer enters a title shorter than 3 characters When the Customer submits the create form Then the system rejects the request and shows "validation.title_min_length" AC4: Given a PM or Admin tries to create a CR When the request is submitted Then the system denies the action and shows "cr.create_denied"
--------------------------------	--

USER STORY 11 - DELETE DRAFT CHANGE REQUEST

Section	Content
---------	---------

Card	As a Customer I want to delete my Change Request while it is still in DRAFT So that I can remove an incorrect or unnecessary request before it enters the formal workflow
Summary	The Customer selects one of their own Change Requests in DRAFT status and confirms deletion. The system verifies that the user is the creator, checks that the CR is still in DRAFT status, and deletes the CR together with related dependent data according to the database cascade rules.
In-scope	- Delete a CR created by the logged-in Customer - Allow deletion only when the current status is DRAFT - Confirm deletion before executing the action - Remove the CR from the Customer's CR list after successful deletion
Out of scope	- Deleting submitted, approved, rejected, ongoing, closed, or non-DRAFT CRs - Deleting CRs created by another Customer - Restoring a deleted CR - Allowing PM or Admin to delete Customer draft CRs through this flow
Trigger	The process is triggered when the Customer opens a DRAFT Change Request or the CR list, selects the Delete action, and confirms the deletion request.

Pre-condition	- Customer is logged in - CR exists in the system - CR was created by the logged-in Customer - CR current status is DRAFT
Business rule and error message	Rule: Only Customer can delete a Change Request → Error: "Only customers can delete a change request" Rule: Customer can only delete a Change Request in Draft status → Error: "Only draft change requests can be deleted" Rule: Customer can only delete their own Change Request → Error: "You can only delete your own change request" Rule: Change Request must exist → Error: "Change request not found"
Screen design	

Acceptance Criteria	AC1: Given the Customer owns a CR in DRAFT status When the Customer confirms Delete Then the system deletes the CR and shows a successful deletion message AC2: Given the CR is not in DRAFT status When the Customer attempts to delete it Then the system rejects the action and shows "cr.cannot_delete_non_draft" AC3: Given the CR was created by another Customer When the Customer attempts to delete it Then the system denies the action and shows "cr.can_only_delete_own" AC4: Given the Customer opens the delete confirmation dialog When the Customer cancels the confirmation Then the system keeps the CR unchanged
----------------------------	---

USER STORY 12 - SUBMIT DRAFT CHANGE REQUEST

Section	Content
Card	As a Customer I want to submit my DRAFT Change Request So that the request can move from preparation to formal review by the project team

Summary	The Customer submits one of their own Change Requests that is currently in DRAFT status. The system validates ownership and status, changes the CR status from DRAFT to SUBMITTED, and records the transition in the status history so the workflow can continue with PM review and discussion.
In-scope	- Submit an existing DRAFT CR - Change CR status from DRAFT to SUBMITTED - Validate that the Customer is the CR creator - Record status transition history - Prevent editing/deleting the CR through Customer draft-only actions after submission
Out of scope	- Submitting CRs that are already SUBMITTED or in later statuses - Submitting CRs created by another Customer - PM review or moving the CR to IN_DISCUSSION - Automatic approval after submission
Trigger	The process starts when the Customer opens a DRAFT Change Request and clicks the “Submit” button.
Pre-condition	- Customer is logged in - CR exists in the system - CR was created by the logged-in Customer - CR current status is DRAFT - SUBMITTED status exists in master data

Business rule and error message

Rule: Only Customer can submit a Change Request → Error: **"Only customers can submit a change request"**

Rule: Customer can only submit a Change Request in Draft status → Error: **"Only draft change requests can be submitted"**

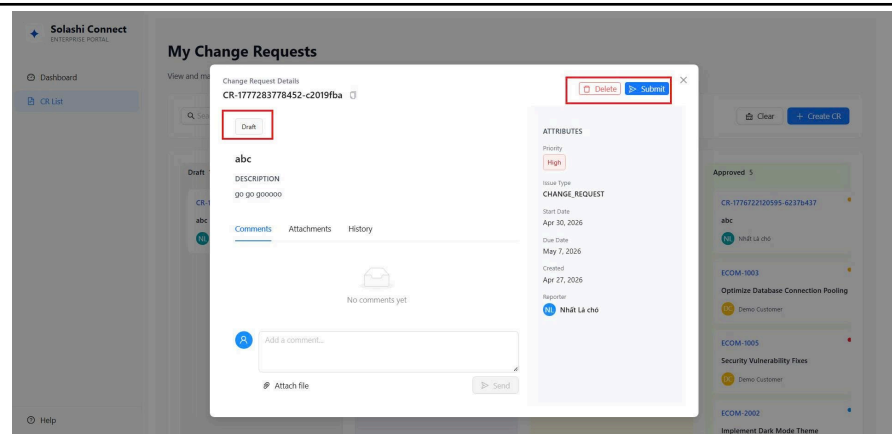

Rule: Customer can only submit their own Change Request → Error: **"You can only submit your own change request"**

Rule: Change Request must exist → Error: "Change request not found"

Rule: Submitted status must exist in the system → Error: **"Submitted status is not available in the system"**

Rule: After submission, Change Request status must change from Draft to Submitted → Error: **"Change request could not be submitted"**

Screen design

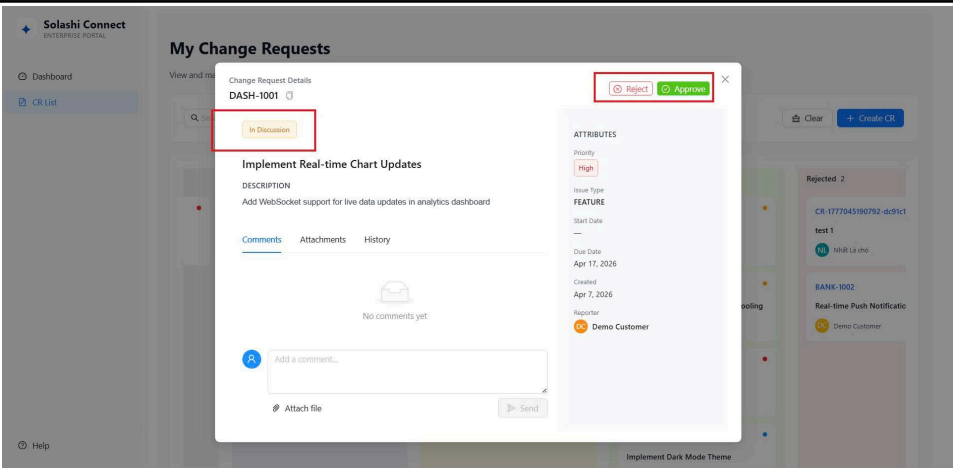

Acceptance Criteria	AC1: Given the Customer owns a CR in DRAFT status When the Customer clicks Submit Then the system changes the CR status from DRAFT to SUBMITTED AC2: Given the CR is submitted successfully When the system updates the status Then the system records a status history entry with the note "CR submitted by creator" AC3: Given the CR is not in DRAFT status When the Customer attempts to submit it Then the system shows "cr.cannot_submit_non_draft" AC4: Given a PM or Admin attempts to submit a CR When the submit action is requested Then the system denies the action and shows "cr.submit_denied"
--------------------------------	---

USER STORY 13 - APPROVE OR REJECT CHANGE REQUEST IN DISCUSSION

Section	Content
Card	As a Customer I want to approve or reject a Change Request that is in IN_DISCUSSION status So that I can give a final decision after discussing the request details with the project team
Summary	After the PM moves a submitted Change Request into IN_DISCUSSION, the Customer reviews the discussion results and decides whether to approve or reject the request. The system validates that the current status is IN_DISCUSSION, allows the Customer to move the CR to APPROVED or REJECTED, and records the decision in the status history.
In-scope	- Approve a CR from IN_DISCUSSION to APPROVED - Reject a CR from IN_DISCUSSION to REJECTED - Validate Customer permission for the transition - Save optional transition notes - Record status history for audit tracking
Out of scope	- Customer approving or rejecting CRs outside IN_DISCUSSION status - Customer moving CRs to ON_GOING or CLOSED - PM approval/rejection workflow - Editing CR content during approval or rejection
Trigger	The process is triggered when the Customer opens a Change Request in IN_DISCUSSION status and clicks either “Approve” or “Reject”.

Pre-condition	- Customer is logged in - CR exists in the system - CR current status is IN_DISCUSSION - APPROVED and REJECTED statuses exist in master data - Customer has permission to access the CR
Business rule and error message	Rule: Customer can only approve or reject a Change Request in In Discussion status → Error: "Only change requests in discussion can be approved or rejected" Rule: Customer can approve a Change Request by changing its status to Approved → Error: "Change request could not be approved" Rule: Customer can reject a Change Request by changing its status to Rejected → Error: "Change request could not be rejected" Rule: Target status must be valid → Error: "Selected status is not available" Rule: Status transition must be allowed for Customer → Error: "This status change is not allowed" Rule: Change Request must exist → Error: "Change request not found" Rule: Notes must not exceed 1000 characters → Error: "Notes must not exceed 1000 characters"

Screen design

Acceptance Criteria	AC1: Given the CR is in IN_DISCUSSION status When the Customer selects Approve Then the system changes the CR status to APPROVED AC2: Given the CR is in IN_DISCUSSION status When the Customer selects Reject Then the system changes the CR status to REJECTED AC3: Given the Customer approves or rejects the CR successfully When the system updates the status Then the system creates a status history record with the Customer as the user who changed the status AC4: Given the CR is not in IN_DISCUSSION status When the Customer attempts to approve or reject it Then the system rejects the action
--------------------------------	---
